In mathematics, the trigonometric functions (also called circular functions, angle functions or goniometric functions) are functions of an angle. They relate the angles of a triangle to the lengths of its sides. Trigonometric functions are important in the study of triangles and modeling periodic phenomena, among many other applications.

412 Chapter 7 Try it Now 1. Solve $t^2 + 2\sin(t) - 1 = 0$ for all solutions $t \in [0, 2\pi]$ When solving some trigonometric equations, it becomes necessary to rewrite the equation first using trigonometric identities.
